

How I grade

Lau Møller Andersen

2026-09-17

Some remarks about I grade

- don't show summaries of models
- `summary(model) # no no`
-only show what I need to see'
- Remember to include the code that would give you your result
- provide the pdf of the knitted Rmd and the Rmd in your upload to BrightSpace
- please don't answer questions in comments
- Remember to use the natural units for variables and estimates, e.g. for freq it is Hz
- Plot meaningful x-axes and y-axes, put a label and a unit, also for the design matrices
- for pdf's make sure that you stay within margins
- indicate clearly who wrote what - whenever author changes, use the following:
 - keep the questions in the text, so I (and you) can easily follow where you are
 - and preferably put the answers right after: like this
- q1: *keep my original formulation*
- a1: your answer
- q2: *keep my original formulation*
- a2: your answer

If you write this in a study group, clearly indicate when the author changes like this

_____ *Name of author 1* _____

answering question 1

_____ *Name of author 2* _____

answering question 2

Detailed written feedback will be provided for Assignment 0 only, with the aim of aligning expectations of the instructor and students regarding how assignments will generally be read and graded. This has to be handed in as a study group assignment – otherwise you do NOT get feedback. Oral feedback will be provided on subsequent portfolio assignments during in-class assignment preparation sessions, where students will have ample opportunity to ask the instructor questions on their assignments-in-progress.
